

BURN BARREL - O-SCALE (1:48) w/ FLICKERING LED

The Oasis Market Burn Barrel is a 3D-Printed 55 gallon drum rendered in 1:48 scale. These are perfect for O-scale train layout or a diorama. The realistic barrels are black with hand-painted red patina making each barrel unique. The finish gives them the aged look of a rusty barrel used outside for burning debris.

The completed barrel assembly includes a 12VDC 3mm flickering red LED mounted in the base and is prewired with a resistor. Also included is a tuft of synthetic fibre-fill that reflects the red from the LED giving the illusion of flame or smoke rising from the barrel.

DIRECTIONS:

To add to your layout or diorama attach the red and black leads to a 12V DC power supply (not included).

TIPS:

LEDs only work when the red lead is attached to the positive (+) pole and the black lead is attached to the negative (-) pole of the power supply. If you plug in your LED and it does not illuminate, simply switch the leads. Reversing the polarity will not harm the LED.

If your power supply has a round plug you can determine which is positive by reviewing the diagram on the power supply. The diagram will look similar to the one below. This diagram illustrates the positive pole (+) is located in the center of the plug.

RECOMENDED ACCESSORIES: (not included)

12VDC 1A Power Supply

No-solder Female Terminal Connector
